SUNDAY

09h00 – 09h30 – Recap questions from yesterday

- Can someone explain the difference between hemianopia and neglect, how would you explain this to a patient or their family?
- What are the different treatment approaches?

09h30 – 10h00 – Introduce a case study.

- Mr Ruzzo – you are taking an elderly man to make a hot drink in the kitchen with his wife present. Before his stroke he was living with his wife who is fit and well. You give him instructions and show him where everything is in the kitchen.
- What information would you want to know before he starts?

10h00 – 10h30 - General cognitive screening tools

- Understanding pre-stroke cognition, education levels, previous employment
- Montreal Cognitive Assessment (MOCA)
- Oxford Cognitive Screen (OCS)

10h30 – 11h30 – Attention and memory

- Types of attention
- Assessment of attention
- Treatment – education, process training, strategy training and functional training
- Components of memory
- Assessment of memory
- Treatment options
- Mr Ruzzo - discussion of different clinical scenarios (he doesn't start the task, his wife talks throughout the session, he can't find the milk, he makes the wrong hot drink)

10h30 – 11h30 – Attention and memory

- Types of attention
- Assessment of attention
- Treatment – education, process training, strategy training and functional training
- Components of memory
- Assessment of memory
- Treatment options
- Mr Ruzzo - discussion of different clinical scenarios (he doesn't start the task, his wife talks throughout the session, he can't find the milk, he makes the wrong hot drink)

11h30 – 12h30 - Apraxia and executive functioning

- Types of apraxia
